

Royal Bank of Canada

Pillar 3 Report

As at July 31, 2022

TABLE OF CONTENTS

CAUTION REGARDING FORWARD-LOOKING STATEMENTS	1
ABOUT ROYAL BANK OF CANADA	1
CAPITAL FRAMEWORK	1
LEVERAGE FRAMEWORK	2
TLAC FRAMEWORK	3
DISCLOSURE MAP	4
OVERVIEW OF KEY METRICS, RISK MANAGEMENT AND RWA	9
KM1: Key Capital and Leverage metrics (at consolidated group level)	9
OVA: Bank risk management approach	10
OV1: Overview of risk weighted assets (RWA)	12
RWA: Risk-Weighted Assets by Regulatory Approach	13
LINKAGES BETWEEN FINANCIAL STATEMENTS AND REGULATORY EXPOSURES	15
L11: Differences between accounting and regulatory scopes of consolidation and mapping of financial statement categories with regulatory risk categories	15
L12: Main sources of differences between regulatory exposure amounts and carrying values in financial statements	16
LIA: Explanations of differences between accounting and regulatory exposure amounts	17
CAPITAL	18
CC1: Composition of Capital	18
CC2: Regulatory capital balance sheet	21
CREDIT RISK	24
CRA: General qualitative information about credit risk.....	24
CR1: Credit quality of assets	25
CRB: Additional disclosure related to the credit quality of assets	26
CRC: Qualitative disclosure requirements related to credit risk mitigation techniques	34
CRD: Qualitative disclosures on banks' use of external credit ratings under the standardized approach for credit risk	35
CR4: Standardized approach – credit risk exposure and credit risk mitigation (CRM) effects	36
CR5: Standardized approach – exposures by asset classes and risk weights	37
CRE: Qualitative disclosures related to internal risk-based (IRB) models.....	39
CR6: IRB – Credit risk exposures by portfolio and PD range.....	42
CR7: IRB – Effect on RWA of credit derivatives used as CRM techniques.....	48
CR8: RWA flow statements of credit risk exposures	48
COUNTERPARTY CREDIT RISK	49
CCRA: Qualitative disclosure related to counterparty credit risk.....	49
CCR1: Analysis of counterparty credit risk (CCR) exposure by approach	50
CCR2: Credit valuation adjustment (CVA) capital charge	51
CCR3: Standardized approach – CCR exposures by regulatory portfolio and risk weights.....	52
CCR4: IRB – CCR exposures by portfolio and PD scale	53
CCR6: Credit derivatives exposures	55
CCR7: RWA flow statements of CCR exposures under the Internal Model Method (IMM).....	55
CCR8: Exposures to central counterparties	56
SECURITIZATION	58
SECA: Qualitative disclosure requirements related to securitization exposures	58
SEC1: IRB – Securitization exposures in the banking book.....	59
SEC2: IRB – Securitization exposures in the trading book	61
SEC3: Securitization exposures in the banking book and associated regulatory capital requirements – bank acting as originator or as sponsor	63
SEC4: Securitization exposures in the banking book and associated capital requirements – bank acting as investor	65
MARKET RISK	67
MRA: Qualitative disclosure requirements related to market risk.....	67
MRB: Qualitative disclosures for banks using the Internal Models Approach (IMA)	69
MR1: Market risk under standardized approach.....	70
MR2: RWA flow statements of market risk exposures under the Internal Models Approach (IMA)	71
MR3: IMA values for trading portfolios	72
LEVERAGE	73
LR1: Summary comparison of accounting assets vs leverage ratio exposure measure	73
LR2: Leverage ratio common disclosure template	74

TOTAL LOSS ABSORBING CAPACITY (TLAC) DISCLOSURE REQUIREMENTS	75
KM2: Key metrics – TLAC requirements (at resolution group level).....	75
TLAC1: TLAC composition (at resolution group level)	76
TLAC2: Material subgroup entity – creditor ranking at legal entity level (G-SIBs only).....	78
TLAC3: Resolution entity – creditor ranking at legal entity level	80
OPERATIONAL RISK	82
INTEREST RATE RISK IN THE BANKING BOOK	82

Caution regarding forward-looking statements

From time to time, we make written or oral forward-looking statements within the meaning of certain securities laws, including the “safe harbour” provisions of the *United States Private Securities Litigation Reform Act of 1995* and any applicable Canadian securities legislation. We may make forward-looking statements in this Pillar 3 Report, our 2021 Annual Report, in other filings with Canadian regulators or the SEC, in other reports to shareholders including our Q3 2022 Report to Shareholders, and in other communications. Forward-looking statements are typically identified by words such as “believe”, “expect”, “foresee”, “forecast”, “anticipate”, “intend”, “estimate”, “goal”, “commit”, “target”, “objective”, “plan” and “project” and similar expressions of future or conditional verbs such as “will”, “may”, “might”, “should”, “could” or “would”. By their very nature, forward-looking statements require us to make assumptions and are subject to inherent risks and uncertainties, which give rise to the possibility that our predictions, forecasts, projections, expectations or conclusions will not prove to be accurate, that our assumptions may not be correct and that our financial performance and management objectives, vision and strategic goals will not be achieved. We caution readers not to place undue reliance on these statements as a number of risk factors could cause our actual results to differ materially from the expectations expressed in such forward-looking statements. Additional information about certain risk factors can be found in the Caution regarding forward-looking statements and risk sections of our 2021 Annual Report and the Risk management section of our Q3 2022 Report to Shareholders. When relying on our forward-looking statements to make decisions with respect to us, investors and others should carefully consider these risk factors as well as other uncertainties and potential events. Except as required by law, we do not undertake to update any forward-looking statement, whether written or oral, that may be made from time to time by us or on our behalf.

About Royal Bank of Canada

Royal Bank of Canada is a global financial institution with a purpose-driven, principles-led approach to delivering leading performance. Our success comes from the 92,000+ employees who leverage their imaginations and insights to bring our vision, values and strategy to life so we can help our clients thrive and communities prosper. As Canada’s biggest bank, and one of the largest in the world based on market capitalization, we have a diversified business model with a focus on innovation and providing exceptional experiences to our 17 million clients in Canada, the U.S. and 27 other countries. Learn more at rbc.com.

Our business segments include Personal & Commercial Banking, Wealth Management, Insurance, Investor & Treasury Services, and Capital Markets. Our business segments are supported by Corporate Support, which consists of Technology & Operations and Functions. Technology & Operations provides the technological and operational foundation required to effectively deliver products and services to our clients, while Functions includes our finance, human resources, risk management, internal audit and other functional groups, as well as our corporate treasury function.

Capital framework

Our consolidated regulatory capital requirements are determined by guidelines issued by the Office of the Superintendent of the Financial Institutions (OSFI), which are based on the Basel III framework adopted by the Basel Committee on Banking Supervision (BCBS).

The Basel III framework integrates three “Pillars” to establish a robust foundation for banking supervision and financial stability:

- Pillar 1 prescribes minimum capital requirements and addresses capital adequacy, including standards for calculating risk-weighted assets (RWA);
- Pillar 2 requires the establishment of internal assessment processes and supervisory review to evaluate the risk profile and capital adequacy of banks;
- Pillar 3 enhances the consistency and comparability of risk and capital profiles between banks and across jurisdictions for market participants through meaningful disclosures.

Under Basel III, banks use defined approaches to calculate their minimum regulatory capital required to support various risks and exposure types including credit risk, counterparty credit risk, market risk, operational risk, and securitizations exposures. Refer to the “Capital management” section of our 2021 Annual Report for further information on calculation approaches. Refer to the following sections in this report for further information on:

- Capital
- Credit Risk
- Counterparty Credit Risk
- Market Risk
- Operational Risk
- Securitization Exposures

Capital framework (continued)

In January 2015, the BCBS published the “*Revised Pillar 3 Disclosure Requirements*” (Revised Standards) to encourage market discipline through regulatory disclosure requirements. The Revised Standards require comprehensive disclosure of our risks and regulatory capital including our methodologies used in calculating capital requirements instituted under Pillar 1. Existing requirements in the areas of credit risk, counterparty credit risk and securitization activities were replaced by the Revised Standards. OSFI mandated the domestic implementation of the first phase of the Revised Standards for Canadian domestic systemically important banks (D-SIBs) for the reporting period ending October 31, 2018. This Pillar 3 report provides disclosures reflective of this first phase of the Revised Standards. In addition, this Pillar 3 report provides disclosure required under OSFI’s May 2018 Capital Disclosure Requirements Guideline.

In March 2017, the BCBS issued its second phase of the Pillar 3 disclosure requirements entitled, “*Pillar 3 disclosure requirements – consolidated and enhanced framework*”. The disclosure standard consolidates all existing Pillar 3 disclosure requirements of the Basel III framework, including the leverage and liquidity ratios disclosure templates.

In December 2018, the BCBS issued its third and final phase (phase three) of the Pillar 3 disclosure requirements, *Pillar 3 disclosure requirements – updated framework*. This phase incorporates revisions and additions to the Pillar 3 framework arising from the finalization of the Basel III reforms in December 2017, such as additional disclosure requirements comparing RWA as determined by banks’ internal models against results based on the Standardized Approach, and new disclosure requirements on asset encumbrance and capital distribution constraints. The phase three requirements, together with the phase one and two disclosure requirements released in January 2015 and March 2017, respectively, complete the Pillar 3 framework. On March 27, 2020, OSFI announced that it would delay its implementation of the phase three BCBS Pillar 3 disclosure requirements to January 31, 2023. On March 11, 2021, OSFI released for public consultation its draft revised Pillar 3 guideline incorporating the domestic implementation of all three phases to be effective in fiscal 2023. This Pillar 3 guideline was finalized by OSFI on January 31, 2022 with an implementation date requirement of April 30, 2023. Our Pillar 3 disclosures will be updated to reflect this finalized OSFI disclosure guideline requirements. On November 11, 2021, BCBS finalized revisions to its market risk disclosures which we expect OSFI will also incorporate in due course into its disclosure requirements for market risk, the framework which is effective in Q1 2024.

Effective November 1, 2018, OSFI adopted the BCBS frameworks related to the Standardized Approach for measuring counterparty credit risk (SA-CCR), capital requirements for bank exposures to central counterparties (CCPs) and the revised securitization framework as incorporated in OSFI’s Capital Adequacy Requirements (CAR) guideline.

On November 1, 2019, the impact of adoption of IFRS 16 *Leases*, and removal of allowed grandfathering and transitioning treatment for certain securitization and counterparty credit risk exposures was incorporated in our measurement of regulatory capital. In addition, we adopted, the Standardized Approach for consolidated regulatory reporting of operational risk as the use of the Advanced Measurement Approach was discontinued by OSFI. This Pillar 3 report reflects the CAR guideline requirements for all periods, including prior period comparatives.

To address the economic disruption caused by the COVID-19 pandemic in Q2 2020, OSFI announced a series of regulatory capital modifications which are described in more detail in our Capital management section of our 2021 Annual Report as updated by the Capital management section of our Q3 2022 Report to Shareholders. Announced changes included the reduction of the domestic stability buffer to 1% of total RWA while also providing transitional expected credit loss (ECL) modifications over 3 years and risk-weight exclusions for certain exposures. In addition, OSFI also allowed delaying for six months, from the date of deferral, the past due treatment of all loan deferrals requested by clients. On August 31, 2020, OSFI amended this deferral treatment allowing any deferrals issued on or after August 31 to September 30, 2020 to only be exempt from past due treatment for a period of 3 months. Therefore, any deferrals given to clients on or after October 1, 2020 must follow the past due treatment required under the CAR guidelines. Our reported figures reflect this guidance and further updated guidance from OSFI including the raising of the domestic stability buffer to 2.5% effective October 31, 2021, as fully described in our Capital management section of our 2021 Annual Report as updated by the Capital management section of our Q3 2022 Report to Shareholders.

Since Q2 2020, our disclosure for KM1: Key Capital and Leverage metrics template includes disclosure of our capital ratios assuming transitional ECL modifications had not been applied, as required by OSFI.

Refer to the Capital management section of our Q3 2022 Report to Shareholders for further information on upcoming regulatory reforms which were announced during the quarter.

Leverage framework

On October 30, 2014, OSFI issued its “*Leverage Requirements (LR)*” guideline, which reflected its adoption of the BCBS “*Basel III leverage ratio framework and disclosure requirement*” effective the first fiscal quarter of 2015. The LR guideline requires banks to disclose their leverage ratio and its underlying components. The leverage ratio is defined as the capital measure divided by the leverage exposure measure. The capital measure is defined as Tier 1 capital and the leverage exposure measure is the sum of (a) on-balance sheet exposures; (b) derivative exposures; (c) securities financing transaction (SFT) exposures and (d) off-balance sheet items.

Unmanaged leverage can lead to unwarranted corrective measures due to excessive exposure growth or capital reduction, causing detriment to the bank's balance sheet and overall shareholders' wealth. Maintaining a prescribed minimum level of leverage helps neutralize leverage risk in the event of unexpected economic crises. OSFI requires maintenance of a minimum leverage ratio of 3% at all times.

On October 30, 2018, OSFI published its updated LR guideline, effective November 1, 2018. The revisions aligned the LR guideline with OSFI's adoption of the BCBS "*Standardized approach for measuring counterparty credit risk exposures*" and *Revisions to the securitization framework*". On November 1, 2019, the impact of adoption of IFRS 16 *Leases*, was incorporated into our leverage ratio.

In addition to the pre-existing 3% leverage ratio minimum requirement, the BCBS introduced an additional leverage ratio buffer requirement for global systemically-important banks (G-SIB) as part of their Basel III reforms "*Basel III: Finalizing post-crisis reforms*" (December 2017)". The G-SIB leverage ratio must be met with Tier 1 capital and is set at 50% of a G-SIB's higher-loss absorbency risk-weighted requirement. On July 16, 2018 OSFI announced that all Canadian D-SIBs will be held to the 3.5% minimum leverage requirements including RBC which has been designated a G-SIB. This minimum leverage requirement has now been incorporated into the revised LR guideline effective Q2 2023 released by OSFI on January 31, 2022.

On November 20, 2018, OSFI updated its Leverage disclosure guidelines, which are based on BCBS phase two disclosure requirements, to reflect the revisions to the LR and CAR guidelines mentioned above. Refer to our Leverage disclosures included in this report, as required by OSFI.

To address the economic disruption caused by the COVID-19 pandemic in Q2 2020, OSFI announced two leverage ratio modifications. The first leverage ratio modification required the exclusion of central bank reserves and sovereign-issued securities that qualify as high quality liquid assets from our total leverage exposure amount for a period of one year ending April 30, 2021. The second modification required the exclusion of loans issued under the US Government Payment Protection Program (PPP) from our total leverage exposure amount. On November 5, 2020, OSFI extended the allowed exclusion of central bank reserves and sovereign-issued securities another eight months to December 31, 2021. On August 12, 2021 OSFI announced that sovereign-issued securities would no longer be eligible for exclusion effective January 1, 2022 but that central bank reserves would continue to be eligible for exclusion until further notice. Our reported leverage figures reflect this guidance as fully described in our Capital management section of our Q3 2022 Report to Shareholders.

Since Q2 2020, our disclosure of LR2: Leverage ratio common disclosure template includes disclosure of our leverage ratio assuming transitional ECL modification had not been applied, as required by OSFI.

TLAC framework

The Canadian Bail-in regime, including OSFI's Total Loss Absorbing Capacity (TLAC) guideline, came into effect on September 23, 2018. The purpose of the TLAC requirement is to address the sufficiency of a Canadian D-SIB's loss absorbing capacity in supporting its recapitalization in the event of its failure. TLAC is defined as the aggregate of Tier 1 capital, Tier 2 capital, and other TLAC instruments (senior bail-in debt), which includes senior unsecured debt with an original term to maturity of greater than 400 days and remaining term to maturity of greater than 365 days. Under the Bail-in regime, claims of some creditors whose claims otherwise rank equally with those of the holders holding bail-inable notes would be excluded from a bail-in conversion and thus the holders and beneficial owners of bail-inable notes will have to absorb losses ahead of these other creditors as a result of the bail-in conversion.

TLAC requirements establish two minimum standards; which are required to be met effective November 1, 2021: the risk-based TLAC ratio, which builds on the risk-based capital ratios described in the CAR guideline, and the TLAC leverage ratio, which builds on the leverage ratio described in OSFI's LR guideline. The risk-based TLAC ratio is defined as TLAC divided by Total risk-weighted assets (RWA) while the TLAC leverage ratio is defined as TLAC divided by the Leverage ratio exposure. OSFI requires systemically important banks to maintain a minimum TLAC ratio of 22.5% (inclusive of the revised domestic stability buffer (DSB) of 1.0% since Q2 2020) and a TLAC leverage ratio of 6.75%. The TLAC ratio requirements increased to 24% in Q4 2021 reflecting the 1.5% increase of the DSB effective October 31, 2021. We began issuing TLAC eligible debt in Q4 2018 and our TLAC ratio is expected to increase through normal course refinancing of maturing debt. More details on our TLAC issuance is available in our Capital management section of our Q3 2022 Report to Shareholders.

In May 2018, OSFI published its TLAC Disclosure guideline for Canadian D-SIBs. The disclosure requirements reflect the BCBS TLAC disclosure requirements as outlined in the BCBS March 2017 phase two requirements mentioned above. Refer to our TLAC disclosures included in this report, as required by OSFI.

To reflect the transitional ECL modification provided by OSFI, as discussed in the Capital framework and Leverage framework sections above, since Q2 2020, our disclosure of KM2: Key metrics – TLAC requirements includes both our TLAC ratio and TLAC leverage ratio assuming the transitional ECL modification had not been applied, as required by OSFI.

14a	Basel III leverage ratio (row 2a / row 13) with transitional arrangements for ECL provisioning not applied	4.6%	4.6%	4.9%	-

¹ This table incorporates the impact of expected credit loss (ECL) accounting on regulatory capital including transitional ECL provisioning modification granted by OSFI on Mar. 27, 2020. This ECL provisioning modification reduced from a 75% after-tax exclusion rate for growth in Stage 1 and Stage 2 allowances allowed in 2020 to only a 25% after-tax exclusion rate allowed for 2022. This rate will cease after Q4 2022.

² Bank specific countercyclical buffer requirement for Q3 2022 was not material, the amount which is determined based on our private sector exposures in jurisdictions identified by BCBS.

³ 8% reflects minimum capital requirements which includes D-SIB/G-SIB surcharge, and excludes the OSFI Domestic Stability Buffer of 2.5% effective October 2021. Refer to the Capital management section of our Q3 2022 Report to Shareholders.

Our CET1 ratio was 13.1%, down 10 bps from last quarter, mainly reflecting share repurchases and RWA growth (excluding FX), partially offset by internal capital generation.

Our Tier 1 capital ratio of 14.3% was down 10 bps and our Total capital ratio of 15.9% was down 10 bps, mainly reflecting the factors noted above under the CET1 ratio.

RWA increased by \$3 billion, mainly reflecting business growth in wholesale loans, residential mortgages and personal lending. These factors were partially offset by a reduction in loan underwriting commitment balances and trading activities. Net model updates, mainly due to the impact of the Q2 2020 period of significant market volatility no longer being reflected in our two-year historical VaR period, the impact of foreign exchange translation and net credit migration also contributed to a reduction in RWA. The impact of foreign exchange translation on RWA is largely mitigated with economic hedges in our CET1 ratio.

Our Leverage ratio of 4.6% was down 10 bps, mainly due to business-driven growth in leverage exposures and share repurchases, partially offset by net internal capital generation.

Leverage exposures increased by \$27.4 billion, mainly driven by business growth in residential mortgages, wholesale loans, undrawn commitments and repo-style transactions, partially offset by the impact of foreign exchange translation.

OVA: Bank risk management approach

25	Total (1+4+7+8+9+10+11+12+16+19+23+24)	589,050	585,839	543,047	47,124	3,211

¹ The minimum capital requirements for each category can be calculated by multiplying the total RWA by 8% as per OSFI CAR guidelines.

² Includes RWA associated with CCP exposures, which EAD is calculated based on SA-CCR.

³ Effective November 1, 2019, OSFI discontinued the AMA approach.

Total RWA increased by \$3.2 billion or 0.6%, driven by the following:

Credit risk

RWA increased by \$10.2 billion, mainly driven by business growth in our corporate and commercial loans, residential mortgages and personal lending. These factors were partially offset by a reduction of our underwriting commitment balances, foreign exchange translation and net credit migration, mainly in our wholesale portfolios. The impact of foreign exchange translation on RWA is largely mitigated with economic hedges in our CET1 ratio.

Counterparty credit risk

RWA decreased by \$4.1 billion, mainly due to client driven activity in our derivatives and securities financing transaction trading businesses.

Securitization exposures in banking book

RWA increased by \$0.2 billion, mainly driven by client activity.

Market risk

RWA decreased \$3.3 billion, mainly driven by net model updates, mainly due to the impact of the Q2 2020 period of significant market volatility no longer being reflected in our two-year historical VaR period.

Operational risk

RWA increased \$0.3 billion, mainly driven by average revenue growth.

RWA: Risk-Weighted Assets by Regulatory Approach

The following table provides details of our risk-weighted assets by type of risk and regulatory approach.

TOTAL CAPITAL RISK-WEIGHTED ASSETS ¹	Q3/2022						Q3/2022	Risk-weighted assets All-in Basis

¹ Calculated using guidelines issued by OSFI under the Basel III All-in framework.

² Total exposure represents exposure at default (EAD) which is the expected gross exposure upon the default of an obligor. This amount excludes any allowance against impaired loans or partial write-offs and does not reflect the impact of credit risk mitigation. Exposures acquired through the Federal Reserve Paycheck Protection Program lending facility have been excluded, as required by OSFI.

³ Represents the average of counterparty risk weights within a particular category.

⁴ The minimum capital requirements for each category can be calculated by multiplying the total RWA by 8% as per OSFI CAR guidelines.

⁵ For credit risk, a majority of our portfolios use the Internal Ratings Based (IRB) Approach and the remainder use the Standardized Approach.

⁶ CAR guidelines define banking book equities based on the economic substance of the transaction rather than the legal form or accounting treatment associated with the financial instrument. As such, differences exist in the identification of equity securities held in the banking book and those reported in the financial statements. Banking book equities are financial instruments held for investment purposes and are not part of our trading book, consisting of publicly-traded and private equities, partnership units, venture capital and derivative instruments tied to equity interests.

As at Q3/22, the amount of publicly-traded equity exposures was \$1,551 million and private equity exposures amounted to \$2,479 million. Total exposure represents EAD, which is the expected gross exposure upon the default of an obligor.

Under OSFI guidelines, the Simple Risk Weight method under the Market-based Approach is being used to calculate RWA for direct equity exposures (\$2,417 million). The calculation of RWA for Equity Investments in Funds (\$3,249 million) uses the Mandate-based and Fall-Back Approaches.

⁷ The scaling factor represents a calibration adjustment of 6% as prescribed by OSFI under the Basel III framework and is applied to RWA amounts for credit risk assessed under the IRB Approach.

⁸ For market risk RWA measurement, we use an internal models approach where we have obtained regulatory approval, and a standardized approach for products yet to be approved. For standardized approach, we use internally validated models.

⁹ Regulatory capital for our correlation trading portfolios is determined through the standardized approach as prescribed by OSFI. Therefore, we do not have a Comprehensive Risk Charge for these portfolios. Our securitization and resecuritization positions in our trading book also have capital requirements under the standardized approach. The changes in value due to market and credit risk in the securitization and resecuritization in the trading book are managed through the daily mark-to-market process. Furthermore, we employ market risk measures such as sensitivities to changes in option-adjusted spreads and underlying asset prices as well as value-at-risk (VaR) and stress testing measures.

¹⁰ The incremental risk charge (IRC) was \$359 million as at Q3/22. The average was \$354 million, high was \$426 million and low was \$277 million for Q3/22. The IRC is measured over a one-year horizon at a 99.9% confidence level. We utilize a technique known as the Monte Carlo simulation process to generate a statistically relevant number of loss scenarios due to ratings migration and default in order to establish the losses at that confidence level. We also make certain assumptions about position liquidity (the length of time to close out a position) within the model that range from a floor of three months to maximum of one year. The determination of liquidity is based on issuer type and credit rating. Credit rating migration and default probabilities (PD) are based on historical data.

¹¹ The models are subject to the same internal independent vetting and validation procedures used for all regulatory capital models. Important assumptions are re-reviewed at least annually. Due to the long time horizon and high confidence level of the risk measure, we do not perform back-testing as we do for the VaR measure.

¹² Home equity line of credit (HELOC) exposures under the IRB Approach reported as "Other Retail" in this table in prior quarters have now been grouped with Residential Mortgages to ensure consistent classification between Standardized Approach and IRB Approach. Prior quarter periods have been updated to the new format.

LINKAGES BETWEEN FINANCIAL STATEMENTS AND REGULATORY EXPOSURES
LI1: Differences between accounting and regulatory scopes of consolidation and mapping of financial statement categories with regulatory risk categories

The following table provides the differences between carrying values presented in our financial statements prepared in accordance with International Financial Reporting Standards (IFRS) and our regulatory exposures. It further breaks down the amounts in our financial statements into regulatory risk categories.

As at July 31, 2022

	a	b	c	d	e	f	g

¹ Column c to g reflect a further breakout of column b by providing the respective CAR guideline frameworks utilized and OSFI COVID-19 guidance.

² Derivative assets and liabilities are subject to both counterparty credit risk and market risk framework – hence column b will not equal to the sum of column c to g.

³ Amount includes exposure related to the US Government Paycheck Protection Program which are excluded from risk-weighting as per OSFI COVID-19 guidance.

LI2: Main sources of differences between regulatory exposure amounts and carrying values in financial statements

The following table provides the key differences between the exposure amounts for regulatory purposes and the accounting carrying values as presented in our financial statements that are within the scope of regulatory consolidation.

As at July 31, 2022

	a	b	c	d	e
(Millions of Canadian dollars)	Total	Credit risk framework	Securitization framework	Counterparty credit risk framework	Market risk framework
1 Asset carrying value amount under scope of regulatory consolidation (as per template LI1)¹	1,807,390	1,169,799	20,632	479,753	251,573
2 Liabilities carrying value amount under regulatory scope of consolidation (as per template LI1) ¹	401,017	-	-	401,017	113,605
3 Total net amount under regulatory scope of consolidation	1,406,373	1,169,799	20,632	78,736	137,968
4 Off-balance sheet amounts ²	1,502,876	407,742	50,053	1,045,080	-
5 Differences due to Fair Value adjustment	2,008	1,947	-	61	-
6 Differences due to different netting rules, other than those already included in row 2	1,696	1,696	-	-	-
7 Differences due to consideration of provisions	-	-	-	-	-
8 Differences due to prudential filters	-	-	-	-	-
9 Difference due to accounting and risk treatment of securitizations and other items	1,226	1,226	-	-	-
10 Exposure amounts considered for regulatory purposes	2,914,179	1,582,410	70,685	1,123,877	137,968

¹ Amount reflects Table LI1 columns (c), (d), (e) and (f) from the previous page. Derivative assets and liabilities are subject to both counterparty credit risk and market risk framework – hence column a will not equal to the sum of column b to e.

² Off-balance sheet amounts reflect the application of credit conversion factors.

LIA: Explanations of differences between accounting and regulatory exposure amounts

Our consolidated balance sheet ("accounting balance sheet") is prepared in compliance with IFRS as issued by the International Accounting Standards Board. We leverage our accounting balance sheet to apply the required regulatory requirements prescribed by OSFI to determine our regulatory capital consolidated balance sheet.

In Template LI1: Differences between accounting and regulatory scopes of consolidation and mapping of financial statement categories with regulatory risk categories, we identify the differences between our IFRS consolidated accounting balance sheet (column a in LI1) and our regulatory capital consolidated balance sheet (column b in LI1). Our regulatory capital consolidated balance sheet, on which capital adequacy requirements are determined, reflects all of our consolidated subsidiaries except for our insurance subsidiaries as prescribed by OSFI's CAR guidelines.

In Template LI2: Main sources of differences between regulatory exposure amounts and carrying values in financial statements, we quantify measurement differences other than regulatory consolidation.

Our banking book regulatory carrying values reflect our IFRS accounting balance sheet values except for our fair valued loans and debt securities carried at fair value through other comprehensive income (FVOCI), which under the Credit risk framework, are measured at amortized cost. Off-balance sheet regulatory asset values reflect prescribed conversion factors and undrawn amounts.

Regulatory carrying values for our Counterparty credit risk related to our derivative assets and liabilities, assets purchased under reverse repurchase agreements and securities borrowed and obligations related to assets sold under repurchase agreements and securities loaned are determined using OSFI's CAR guidelines Chapter 4 Settlement and Counterparty risk framework. On November 1, 2018, OSFI adopted the BCBS Standardized Approach for measuring Counterparty credit risk for derivative regulatory exposures and we have adopted this methodology for our derivative regulatory exposures. The main differences between the accounting and regulatory amounts for Counterparty credit risk relate to regulatory inclusion of potential future exposure amounts and differences in allowed IFRS and regulatory netting rules, and also application of financial collateral in the calculation of regulatory exposure amount.

The regulatory carrying value of exposures subject to the securitization framework includes our on-balance sheet third party securitization holdings as well as our securitized credit card exposures which meet the risk transference requirements under the CAR guidelines Chapter 7 but are not considered securitized for the purposes of our IFRS accounting balance sheet. Our regulatory carrying values are determined based on the BCBS revised securitization framework adopted by OSFI on November 1, 2018.

Our trading book regulatory carrying values are determined as prescribed under the CAR guidelines Chapter 9. We employ OSFI's prudent valuation guidance requirements, as stated in CAR Chapter 9 section 9.8 to our trading book. Refer to our 2021 Annual Report - Risk Management section which provides further insight into how we measure our market risk and the linkage of market risk to selected balance sheet items.

CAPITAL

CC1: Composition of Capital

The following table provides details of our regulatory capital and required regulatory adjustments under OSFI's CAR guidelines. Reconciliation references to CC2 of where these items are located on our IFRS and regulatory balance sheet are also included.

CREDIT RISK

CRA: General qualitative information about credit risk

The table below presents an overview of Pillar 3 disclosure requirements that have been met within our 2021 Annual Report and incorporated by reference into this Pillar 3 report. Our 2021 Annual Report is available free of charge on our website at <http://www.rbc.com/investorrelations>

Pillar 3 disclosures requirement		RBC 2021 Annual Report section	Sub-section
a)	Translation of the business model into the components of the bank's credit risk profile	Credit risk	Overview
			Measurement of economic and regulatory capital - <i>Gross credit risk exposure</i>
b)	Criteria and approach used for defining credit risk management policy and for setting credit risk limits	Enterprise risk management	Risk governance
			Risk appetite
			Risk measurement
			Risk control – <i>Delegated authorities and risk limits</i>
		Credit risk	Overview
			Credit risk assessment
Credit risk mitigation			
c)	Structure and organization of the credit risk management and control function	Enterprise risk management	Risk governance
			Risk control
d)	Interaction between the credit risk management, risk control, compliance and internal audit functions	Enterprise risk management	Risk governance
e)	Scope and content of the reporting on credit risk exposure to the executive management and to the board of directors	Enterprise risk management	Risk governance
			Risk control – <i>Risk monitoring and reporting</i>

CR1: Credit quality of assets

The following table presents a comprehensive view of the credit quality of our on- and off-balance sheet assets.

As at July 31, 2022

		a	b	c	d		e	f	g
		Gross carrying values of		Allowances/ impairments ²	Of which ECL accounting provisions on SA exposures		Of which ECL accounting provisions on IRB exposures	Net values (a+b-c)	
		Defaulted exposures ¹	Non-defaulted exposures		Allocated in regulatory category of Specific ³	Allocated in regulatory category of General ³			
	(Millions of Canadian dollars)								
1	Loans	1,958	776,189	3,667	122	221	3,324	774,480

(g) Ageing analysis of accounting past-due exposures

The following table provides the ageing of our retail and wholesale past due exposures. Amounts presented may include loans past due as a result of administrative processes, such as mortgage loans on which payments are restrained pending payout due to sale or refinance, which can fluctuate based on business volumes. Past due loans arising from administrative processes are not representative of the borrowers' ability to meet their payment obligations. The table excludes loans less than 30 days past due as they are not generally representative of the borrowers' ability to meet their payment obligations.

As at July 31, 2022

(Millions of Canadian dollars)	30 to 89 days	90 days and greater	Total

(h) Breakdown of restructured exposures between impaired and not impaired exposures

Restructured exposures actively benefitting from modified contractual terms as at Jul 31, 2022 are not material (Apr 30, 2022 – not material).

CRC: Qualitative disclosure requirements related to credit risk mitigation techniques

The table below presents an overview of Pillar 3 disclosure requirements that have been met within our 2021 Annual Report and incorporated by reference into this Pillar 3 report. Our 2021 Annual Report is available free of charge on our website at <http://www.rbc.com/investorrelations>

Pillar 3 disclosures requirement	RBC 2021 Annual Report section	Sub-section
a) Core features of policies and processes for, and an indication of the extent to which the bank makes use of, on- and off-balance sheet netting	Credit risk	Credit risk assessment – <i>Counterparty credit risk</i>
	Consolidated Financial Statements	Note 8 - Derivative financial instruments and hedging activities – <i>Derivative-related credit risk</i>
		Note 29 - Offsetting financial assets and financial liabilities
b) Core features of policies and processes for collateral evaluation and management	Credit risk	Credit risk mitigation – <i>Collateral</i>
c) Information about market or credit risk concentrations under the credit risk mitigation instruments used	Credit risk	Credit risk mitigation
		Credit risk approval – <i>Credit risk limits</i>
	Consolidated Financial Statements	Note 8 - Derivative financial instruments and hedging activities

CRD: Qualitative disclosures on banks' use of external credit ratings under the standardized approach for credit risk

As detailed in section CR4, certain of our portfolios RWA amounts are calculated as per OSFI's CAR Guideline Standardized Approach requirements. OSFI's Standardized Approach methodology allows for the reliance on the external credit ratings of counterparties, issued by independent rating agencies, for the determination of RWA. Five external rating agencies ratings, namely, Standard & Poor's (S&P), Moody's Investors Service, Fitch Rating Services, DBRS and Kroll Bond Rating Agency, Inc. have been approved by OSFI. Currently, external ratings are used to determine the RWA amounts associated with our wholesale exposures under the asset classes of corporate, sovereign, public sector entities, multilateral development banks, banks and securities firms. As well, external ratings are used for determining the risk weighting for certain of our securitizations exposures.

External ratings utilized from the above-mentioned rating agencies are either an issuer rating or an issue-specific rating. We rely on an issue-specific rating if it is available for the purposes of determining RWA for the exposure we hold. We utilize the issuer rating only for our exposures which rank pari-passu with senior claims of the issuer.

Our supervisor, OSFI specifies in its CAR guideline the required standard mapping of long term external ratings of the above rating agencies to an equivalent risk weight. We rely on OSFI's mapping to determine the appropriate risk buckets for our Standardized Approach portfolios under the guideline. OSFI's current mapping of external rating agencies rating is reflected in the table below:

Standardized Risk Weight Category	Long-term rating				
	S&P	Moody's	Fitch	DBRS	Kroll
Long Term					
(AAA to AA-)	AAA to AA-	Aaa to Aa3	AAA to AA-	AAA to AA (low)	AAA to AA-
(A+ to A-)	A+ to A-	A1 to A3	A+ to A-	A(high) to A(low)	A+ to A-
(BBB+ to BBB-)	BBB+ to BBB-	Baa1 to Baa3	BBB+ to BBB-	BBB(high) to BBB(low)	BBB+ to BBB-
(BB+ to BB-)	BB+ to BB-	Ba1 to Ba3	BB+ to BB-	BB(high) to BB(low)	BB+ to BB-
(B+ to B-)	B+ to B-	B1 to B3	B+ to B-	B(high) to B(low)	B+ to B-
(Below B-)	Below B-	Below B3	Below B-	CCC or lower	Below B-

We understand that OSFI reviews the list of acceptable rating agencies and will reflect any changes in allowed rating agencies in its revisions to the CAR guidelines.

CR4: Standardized approach – credit risk exposure and credit risk mitigation (CRM) effects

The following table provides the effect of CRM on the calculation of capital requirements under the standardized approach. It presents on-balance sheet and off-balance sheet exposures before and after credit conversion factors (CCF) and CRM as well as associated RWA and RWA density by asset classes. As noted in CRD, the external ratings of the counterparty is relied on to determine the prescribed regulatory risk weight to be assigned.

As at July 31, 2022

	(Millions of Canadian dollars, except as otherwise noted)	a	b	c	d	e	f
		Exposures before CCF and CRM		Exposures post-CCF and CRM		RWA and RWA density	
		On-balance sheet amount	Off-balance sheet amount	On-balance sheet amount	Off-balance sheet amount	RWA	RWA density
1	Sovereigns and their central banks ¹	30,411	286	46,152	40	140	0.3%
2	Non-central government public sector entities	14,689	403	14,689	197	2,774	18.6%
3	Multilateral development banks	4,162	-	4,162	-	-	-

CRE: Qualitative disclosures related to internal risk-based (IRB) models

In measuring credit risk to determine regulatory capital, two principal approaches applied are: the Internal Ratings Based (IRB) approach and the Standardized approach. The majority of our credit risk exposures are reported under the IRB approach, as approved by OSFI. The remainder of our portfolios are reported under the Standardized approach. The Standardized approach uses risk weights prescribed by OSFI to calculate RWA for credit risk exposures.

Under the IRB approach, we determine our own estimates for Probability of Default (PD), Loss Given Default (LGD) and Exposure at Default (EAD). They are the key credit parameters that form the basis of our credit risk measures. Internal ratings for borrower facilities and their corresponding estimates are used for credit approval, risk management, internal capital allocations, and corporate governance functions. In addition, the IRB parameter estimates are critical inputs for enterprise and regulatory stress-testing.

In accordance with the IRB approach for credit risk, models are designed for wholesale and retail portfolios. For Wholesale portfolios, a PD is estimated for each internal borrower grade and LGD and EAD parameters are estimated for each credit facility. For Retail portfolios, borrowers are risk rated using internal credit scoring models. Credit scores are one of the key drivers for segmentation of the portfolios into pools. Retail PD, EAD and LGD parameters are estimated at the pool level. All IRB approach regulatory capital models for wholesale and retail credit risk are subject to approval by the Office of the Superintendent of Financial Institutions (OSFI).

Credit parameter estimates are based on our internal historical default and loan loss experience and are augmented by external data where appropriate. We employ a two-dimensional risk rating system for the majority of our credit portfolios. The first dimension is oriented to the risk of borrower default and quantified through the PD assigned to the borrower. The second dimension captures transaction-specific factors such as collateral, product type, and seniority, and is quantified by LGD and EAD estimates that apply at the credit facility level.

PD is an estimated percentage that represents the likelihood of default of an obligor within a given time period for a specific rating grade or for a particular pool of exposure. Each wholesale obligor is assigned a Borrower Risk Rating (BRR), reflecting an assessment of the credit quality of the obligor and each BRR has a PD calibrated against it. The assignment of BRRs is based on the evaluation of the obligor's business risk and financial risk and is based on fundamental credit analysis, as well as data-driven modelling. PD estimates are designed to be a long-run average of our experience across the economic cycle with margins of conservatism related to the likely range of errors. The BRR differentiates the riskiness of obligors and represents our evaluation of the obligors' ability and willingness to meet their contractual obligations on time over a three-year time horizon.

EAD is an amount expected to be owed by an obligor at the time of default. EAD is estimated based on the current exposure to the obligor and the possible future changes in that exposure driven by factors such as the nature of the credit commitment. Rates are estimated to reflect an economic downturn, with added conservatism to reflect data and statistical uncertainties identified in the modelling process.

LGD is an estimated percentage of EAD that is not expected to be recovered during the collection and recovery process. Each credit facility is assigned an LGD rate reflective of the extent of losses anticipated in the event the obligor defaults. Factors used in estimating LGD include seniority of debt, collateral security, and the industry sector in which the obligor operates. Estimated LGD rates draw primarily on internal loss experience and appropriate external data is used to supplement the estimation process when necessary. LGD rates are estimated to reflect conditions that might be expected to prevail in an economic downturn, with additional conservatism added to reflect data limitations and statistical uncertainties identified in the estimation process.

Estimates of PD, LGD and EAD are reviewed, validated and back-tested by an independent validation team within the bank on an annual basis. In addition, quarterly monitoring and back-testing procedures are performed.

CRE: Qualitative disclosures related to internal risk-based (IRB) models (continued)
EAD Covered by the Various Approaches

The following table outlines the percentage of our EAD covered by the IRB and Standardized approaches for each of our portfolios. The Foundation Internal Ratings Based (FIRB) approach is currently not applied. This table reflects the methodology outlined by OSFI for IRB banks to determine whether they are meeting the 80% threshold calculation minimum requirement.

As at July 31, 2022

EAD (in %)	EAD covered by the various approaches ²		
	Standardized Approach ¹	IRB Approach	Other
Retail			
Residential secured	14%	86%	-
Qualifying revolving	-	100%	-
Other retail	4%	96%	-
Wholesale			
Corporate	17%	83%	-
Sovereign	15%	85%	-
Bank	17%	83%	-
Equity			
Total credit risk	12%	88%	-
Counterparty credit risk	-	83%	17%
Securitization	37%	63%	-
Other assets not subject to Standardized or IRB Approaches	-	-	100%
Total³	9%	91%	-

¹ Standardized Approach includes assumptions and waivers granted by OSFI based on an OSFI approved rollout plan.

² Effective Q1 2022, counterparty credit risk is separately categorized from wholesale exposures. Prior quarter percentages have been revised from those previously presented to conform to the current period presentation.

³ The total for this table is calculated using OSFI's guidance on what exposures are included in the 80% Threshold Calculation for IRB banks.

As at April 30, 2022

EAD (in %)	EAD covered by the various approaches ²

³ The total for this table is calculated using OSFI's guidance on what exposures are included in the 80% Threshold Calculation for IRB banks.

**CRE: Qualitative disclosures related to internal risk-based (IRB) models (continued)****Parameters Governance**

The techniques used to develop models are in accordance with banking industry standards and regulatory requirements. We calibrate our models to ensure that variations of default rates through an economic cycle are included in the underlying data. We also build conservatism into our model development process to reflect statistical uncertainties.

Our models have Model Development Owners (MDO) who are accountable for the development and performance of models within the framework set by our policies, standards and procedures. MDOs are responsible for collecting, defining and documenting model requirements, collecting and reviewing data, testing and evaluating, designing model performance monitoring, and documenting.

Our models are required to be independently reviewed and comprehensively evaluated by the Enterprise Model Risk Management (EMRM) team. EMRM is responsible for the review and challenge of the methodology underpinning the estimation of the parameters. EMRM issues a report at the end of each validation exercise that documents the scope, approach and findings of the review. The parameters reviewed by EMRM are presented to the Credit Models Governance Committee and approved by RBC's senior risk management committee.

Back-testing of Parameters and Model Performance

The IRB credit risk parameters are reviewed, at a minimum, annually and more frequently if deemed necessary. In order to ensure that any material events are identified in a timely fashion, we engage in regular monitoring of realized results against established estimates. In cases where the actual results exceed predefined thresholds, a review of the results will be conducted and documented which may lead to a re-calibration of the parameters. Any recommended changes to the parameters would be approved by the Credit Models Governance Committee, and OSFI as applicable.

CR6: IRB – Credit risk exposures by portfolio and PD range

The following table provides the key parameters used for the calculation of capital requirements for credit risk exposures under the IRB approach, broken down by asset class and PD range.

¹ Refer to "Internal ratings map" under the Credit Risk Assessment section in our 2021 Annual Report MD&A.

² Number of obligors is defined as the number of borrowers in each PD band. For Retail exposures, a borrower can appear in multiple PD bands if the borrower has more than one type of product with the bank. In addition, Retail obligors include borrowers where the portion of the exposure has been securitized given CAR guideline requirements related to retained interests. Wholesale obligors are reflected as unique borrowers. For example, sovereign obligors include central banks or agencies, public sector entities and multilateral development banks which are each reflected as unique borrowers in the sovereign asset class. Retail borrowers with both Visa and Mastercard are counted as one borrower in the asset class qualifying revolving retail.

³ Effective Q1 2022, provisions reflect IFRS 9, Stage 1, 2 & 3 allowances under IRB portfolio.

¹ Refer to "Internal ratings map" under the Credit Risk Assessment section in our 2021 Annual Report MD&A.

² Number of obligors is defined as the number of borrowers in each PD band. For Retail exposures, a borrower can appear in multiple PD bands if the borrower has more than one type of product with the bank. In addition, Retail obligors include borrowers where the portion of the exposure has been securitized given CAR guideline requirements related to retained interests. Wholesale obligors are reflected as unique borrowers. For example, sovereign obligors include central banks or agencies, public sector entities and multilateral development banks which are each reflected as unique borrowers in the sovereign asset class. Retail borrowers with both Visa and Mastercard are counted as one borrower in the asset class qualifying revolving retail.

³ Effective Q1 2022, provisions reflect IFRS 9, Stage 1, 2 & 3 allowances under IRB portfolio.

¹ Refer to "Internal ratings map" under the Credit Risk Assessment section in our 2021 Annual Report MD&A.

² Number of obligors is defined as the number of borrowers in each PD band. For Retail exposures, a borrower can appear in multiple PD bands if the borrower has more than one type of product with the bank. In addition, Retail obligors include borrowers where the portion of the exposure has been securitized given CAR guideline requirements related to retained interests. Wholesale obligors are reflected as unique borrowers. For example, sovereign obligors include central banks or agencies, public sector entities and multilateral development banks which are each reflected as unique borrowers in the sovereign asset class. Retail borrowers with both Visa and Mastercard are counted as one borrower in the asset class qualifying revolving retail.

³ Effective Q1 2022, provisions reflect IFRS 9, Stage 1, 2 & 3 allowances under IRB portfolio.

CR7: IRB – Effect on RWA of credit derivatives used as CRM techniques

The following table provides the effect of credit derivatives used as mitigation techniques in determining RWA amounts. Currently no credit derivatives are used for mitigation.

As at July 31, 2022

	(Millions of Canadian dollars)	a	b
		Pre-credit derivatives RWA	Actual RWA
2	Sovereign - AIRB	-	-
4	Banks - AIRB	-	-
6	Corporate - AIRB	-	-
8	Specialised lending - AIRB	-	-
9	Retail - qualifying revolving (QRRE)	-	-
10	Retail - residential mortgage exposures	-	-
11	Retail - SME	-	-
12	Other retail exposures	-	-
14	Equity - AIRB	-	-
16	Purchased receivables - AIRB	-	-
17	Total	-	-

As at April 30, 2022

	(Millions of Canadian dollars)	a	b
		Pre-credit derivatives RWA	Actual RWA
2	Sovereign - AIRB	-	-
4	Banks - AIRB	-	-
6	Corporate - AIRB	-	-
8	Specialised lending - AIRB	-	-
9	Retail - qualifying revolving (QRRE)	-	-

CR8: RWA flow statements of credit risk exposures

The following table presents the changes in Standardized and IRB RWA amounts over the reporting period for the key drivers of credit risk.

	(Millions of Canadian dollars)	RWA amounts ¹	
		As at July 31, 2022	As at April 30, 2022
1	RWA as at end of previous reporting period	419,124	404,116
2	Asset size ²	13,558	14,419
3	Asset quality ³	(1,285)	(1,119)
4	Model updates ⁴	-	1,212
5	Methodology and policy ⁵	-	-
6	Acquisitions and disposals	-	-
7	Foreign exchange movements	(1,315)	938
8	Other	(630)	(442)
9	RWA as at end of reporting period	429,452	419,124

¹ RWA flow amounts include both IRB and Standardized Approach figures reflecting our approved roll-out plan for transition to IRB.

² Organic changes in portfolio size and composition (including new business and maturing loans).

³ Quality of book changes caused by experience such as underlying customer behaviour or demographics and credit mitigation.

⁴ Updates to the model to reflect recent experience, model implementation, change in model scope or any change to address model malfunctions including changes through model calibrations/realignments.

⁵ Methodology changes to the calculations driven by regulatory policy changes.

COUNTERPARTY CREDIT RISK
CCRA: Qualitative disclosure related to counterparty credit risk

The table below presents an overview of Pillar 3 disclosure requirements that have been met within our 2021 Annual Report and incorporated by reference into this Pillar 3 report. Our 2021 Annual Report is available free of charge on our website at <http://www.rbc.com/investorrelations>

Pillar 3 disclosures requirement		RBC 2021 Annual Report section	Sub-section
a)	Risk management objectives and policies related to counterparty credit risk	Credit risk	Credit risk assessment – <i>Counterparty credit risk</i>
		Consolidated Financial Statements	Note 8 - Derivative financial instruments and hedging activities – <i>Derivative-related credit risk</i>
b)	The method used to assign the operating limits defined in terms of internal capital for counterparty credit exposures and for CCP exposures	Credit risk	Credit risk assessment – <i>Counterparty credit risk</i>
c)	Policies relating to guarantees and other risk mitigants and assessments concerning counterparty credit risk, including exposures towards CCPs	Credit risk	Credit risk assessment – <i>Counterparty credit risk</i>
		Consolidated Financial Statements	Note 8 - Derivative financial instruments and hedging activities – <i>Derivative-related credit risk</i> Note 29 - Offsetting financial assets and financial liabilities
d)	Policies with respect to wrong-way risk exposures	Credit risk	Credit risk assessment – <i>Wrong-way risk</i>
e)	The impact in terms of the amount of collateral that the bank would be required to provide given a credit rating downgrade	Liquidity and funding risk	Credit ratings

CCR1: Analysis of counterparty credit risk (CCR) exposure by approach

The following table provides a comprehensive view of the methods used to calculate counterparty credit risk exposures and the main parameters used within each method, if applicable. Refer to CCR 8 for our central counterparty clearing house exposures. Figures below reflect both house and client trades.

As at July 31, 2022

		a	b	c	d	e	f
		Replacement Cost	Potential future exposure	EEPE	Alpha used for computing regulatory EAD	EAD post-CRM ¹	RWA ²
	(Millions of Canadian dollars, except as otherwise noted)						
1	SA-CCR (for derivatives) ^{1,2}	21,529	37,450		1.4	82,179	25,083
1a	Current Exposure Method (CEM - for derivatives)						
2	Internal Model Method (for derivatives and SFTs)						
3	Simple Approach for credit risk mitigation (for SFTs)						
4	Comprehensive Approach for credit risk mitigation (for SFTs)					205,960	8,724
5	VaR for SFTs						
6	Total						33,807

¹ Effective Q1 2020, specific wrong way risk is reflected as per OSFI SA-CCR guideline requirement.

² RWA includes a calibration adjustment of 1.06% as prescribed by OSFI under the Basel III framework.

As at April 30, 2022

		a	b	c	d	e	f
		Replacement Cost	Potential future exposure	EEPE	Alpha used for computing regulatory EAD	EAD post-CRM ¹	RWA ²
	(Millions of Canadian dollars, except as otherwise noted)						
1	SA-CCR (for derivatives) ^{1,2}	26,993	35,818		1.4	87,594	27,782
1a	Current Exposure Method (CEM - for derivatives)						
2	Internal Model Method (for derivatives and SFTs)						
3	Simple Approach for credit risk mitigation (for SFTs)						
4	Comprehensive Approach for credit risk mitigation (for SFTs)					218,492	9,587
5	VaR for SFTs						
6	Total						37,369

¹ Effective Q1 2020, specific wrong way risk is reflected as per OSFI SA-CCR guideline requirement.

² RWA includes a calibration adjustment of 1.06% as prescribed by OSFI under the Basel III framework.

CCR2: Credit valuation adjustment (CVA) capital charge

The following table presents a breakdown of the CVA capital charge by advanced and standardized approaches.

As at July 31, 2022

	(Millions of Canadian dollars)	a	b
		EAD post-CRM ¹	RWA ¹
	Total portfolios subject to the Advanced CVA capital charge		
1	(i) VaR component (including the 3x multiplier)		
2	(ii) Stressed VaR component (including the 3x multiplier)		
3	All portfolios subject to the Standardized CVA capital Charge	82,571	14,997
4	Total subject to the CVA capital charge	82,571	14,997

¹ Effective Q1 2019, OSFI has allowed a 0.7 scalar to be applied to the exposure amount determined under SA-CCR for the purpose of determining CVA.

As at April 30, 2022

	(Millions of Canadian dollars)	a	b
		EAD post-CRM ¹	RWA ¹
	Total portfolios subject to the Advanced CVA capital charge		
1	(i) VaR component (including the 3x multiplier)		
2	(ii) Stressed VaR component (including the 3x multiplier)		
3	All portfolios subject to the Standardized CVA capital Charge	87,936	15,596
4	Total subject to the CVA capital charge	87,936	15,596

¹ Effective Q1 2019, OSFI has allowed a 0.7 scalar to be applied to the exposure amount determined under SA-CCR for the purpose of determining CVA.

CCR3: Standardized approach – CCR exposures by regulatory portfolio and risk weights

The following table presents a breakdown of counterparty credit risk exposures calculated according to the standardized approach by portfolio and risk weight.

As at July 31, 2022

Risk weight Regulatory portfolio (Millions of Canadian dollars)	a	b	c	d	e	f	g	h	i

CCR6: Credit derivatives exposures

The following table presents credit derivatives bought or sold by notional and fair values.

As at July 31, 2022

(Millions of Canadian dollars)	a	b
	Protection bought	Protection sold
Notionals		
Single-name credit default swaps	8,707	9,196
Index credit default swaps	14,164	6,686
Total return swaps	-	-
Credit options	4,264	1,025
Other credit derivatives	-	-
Total notionals	27,135	16,907
Fair values		
Positive fair value (asset)	69	288
Negative fair value (liability)	26	96

As at April 30, 2022

(Millions of Canadian dollars)	a	b
	Protection bought	Protection sold
Notionals		
Single-name credit default swaps	8,402	6,197
Index credit default swaps	11,037	6,199
Total return swaps	-	-
Credit options	2,570	-
Other credit derivatives	-	-
Total notionals	22,009	12,396
Fair values		
Positive fair value (asset)	103	153
Negative fair value (liability)	36	66

CCR7: RWA flow statements of CCR exposures under the Internal Model Method (IMM)

We currently do not apply the IMM to our counterparty credit risk exposures.

CCR8: Exposures to central counterparties

The following table presents a comprehensive view of our exposures to central counterparty clearing houses (CCPs), including due to operations, margins and contributions to default funds, and related RWA.

As at July 31, 2022

(Millions of Canadian dollars)		a	b
		EAD (post-CRM)	RWA
1	Exposures to QCCPs (total)	36,173	409
2	Exposures for trades at QCCPs (excluding initial margin and default fund contributions); of which	15,590	372
3	(i) OTC derivatives	6,005	181
4	(ii) Exchange-traded derivatives	6,430	128
5	(iii) Securities financing transactions	3,155	63
6	(iv) Netting sets where cross-product netting has been approved	-	-
7	Segregated initial margin	8,507	
8	Non-segregated initial margin	5,545	-
9	Pre-funded default fund contributions	1,560	37
10	Unfunded default fund contributions ¹	4,971	-
11	Exposures to non-QCCPs (total)		
12	Exposures for trades at non-QCCPs (excluding initial margin and default fund contributions); of which		
13	(i) OTC derivatives		
14	(ii) Exchange-traded derivatives		
15	(iii) Securities financing transactions		
16	(iv) Netting sets where cross-product netting has been approved		
17	Segregated initial margin		
18	Non-segregated initial margin		
19	Pre-funded default fund contributions		
20	Unfunded default fund contributions		

¹ Unfunded default fund contributions are risk weighted at 0%.

CCR8: Exposures to central counterparties (continued)

As at April 30, 2022

(Millions of Canadian dollars)		a	b
		EAD (post-CRM)	RWA
1	Exposures to QCCPs (total)	33,526	402
2	Exposures for trades at QCCPs (excluding initial margin and default fund contributions); of which	15,597	369
3	(i) OTC derivatives	6,036	178
4	(ii) Exchange-traded derivatives	6,101	122
5	(iii) Securities financing transactions	3,460	69
6	(iv) Netting sets where cross-product netting has been approved	-	-
7	Segregated initial margin	6,905	
8	Non-segregated initial margin	4,595	-
9	Pre-funded default fund contributions	1,413	33
10	Unfunded default fund contributions ¹	5,016	-
11	Exposures to non-QCCPs (total)		
12	Exposures for trades at non-QCCPs (excluding initial margin and default fund contributions); of which		
13	(i) OTC derivatives		
14	(ii) Exchange-traded derivatives		
15	(iii) Securities financing transactions		
16	(iv) Netting sets where cross-product netting has been approved		
17	Segregated initial margin		
18	Non-segregated initial margin		
19	Pre-funded default fund contributions		
20	Unfunded default fund contributions		

¹ Unfunded default fund contributions are risk weighted at 0%.

SECURITIZATION
SECA: Qualitative disclosure requirements related to securitization exposures

The table below presents an overview of Pillar 3 disclosure requirements that have been met within our 2021 Annual Report and incorporated by reference into this Pillar 3 report. Our 2021 Annual Report is available free of charge on our website at <http://www.rbc.com/investorrelations>

Pillar 3 disclosures requirement		RBC 2021 Annual Report section	Sub-section
a)	Objectives in relation to securitization activities	Off-balance sheet arrangements	Off-balance sheet arrangements
		Consolidated Financial Statements	Note 6 - Derecognition of financial assets
		Consolidated Financial Statements	Note 7 - Structured entities
b)	List of SPEs where RBC is sponsor / provides implicit support	Consolidated Financial Statements	Note 7 - Structured entities
c)	Accounting policies for securitization	Consolidated Financial Statements	Note 2 - Summary of significant accounting policies, estimates and judgments - Basis of consolidation - Derecognition of financial assets
		Critical accounting policies and estimates	Consolidation of structured entities
d)	The names of external credit assessment institution (ECAIs) used for securitizations and the types of securitization exposure for which each agency is used	Capital management (also refer to CRD in this document)	Regulatory capital approach for securitization exposures
e)	Use of Basel IAA for capital purposes	Credit risk	n/a
		Capital management	Regulatory capital approach for securitization exposures
f)	Use of other internal assessment for capital purposes	Credit risk	Credit risk assessment

SEC1: IRB – Securitization exposures in the banking book

The following table presents the breakdown of our balance sheet banking book carrying values by our role and type.

As at July 31, 2022

¹ OSFI adopted BCBS Revised Securitization Framework in Q1 2019. Effective Q1 2020, transitional grandfathering is no longer allowed.

² As per disclosure requirements Internal assessment approach (IAA) exposures have been included with securitization external rating based approach.

³ Under the revised securitization framework, OSFI has removed the 1.06% IRB scalar for securitization exposures not risk weighted at 1,250%.

⁴ SEC-IRBA exposures reflect exposures where we have underlying IRB approval currently.

MARKET RISK
MRA: Qualitative disclosure requirements related to market risk
Market risk management strategies and processes

Market risk arises from our trading and non-trading portfolios. The primary objective of trading is to generate an optimal return on our capital while ensuring that risks remain within our risk appetite. Trading activities involve market making, facilitating client transactions and hedging risks generated from these activities.

Market risk also arises from our non-trading portfolio as a result of managing interest rate risk from client-originating banking products (such as loans and deposits) and related hedge transactions, portfolios used for asset-liability management and liquidity management, exposures designated as FVOCI, and exposures from our insurance operations.

To ensure that market risk remains within our risk appetite, we hedge our market risk exposures where appropriate. We use cash and derivative financial instruments, as permitted by regulatory and jurisdictional requirements, to manage the market risk related to our trading and non-trading activities.

The table below presents an overview of Pillar 3 disclosure requirements that have been met within our 2021 Annual Report and incorporated by reference into this Pillar 3 report. Our 2021 Annual Report is available free of charge on our website at <http://www.rbc.com/investorrelations>

Market risk management structure and organization

The Enterprise Market Risk Management Framework is the governance and control framework for the management of market risk within the bank. The market risk management structure is designed to ensure strong corporate governance over all market risk in the context of each business considering operating environment, industry best practices, and regulatory requirements. Drivers of market risk are considered in the bank’s policies, practices and standards which are continuously updated given dynamic market and regulatory conditions.

The table below presents an overview of Pillar 3 disclosure requirements that have been met within our 2021 Annual Report and incorporated by reference into this Pillar 3 report. Our 2021 Annual Report is available free of charge on our website at <http://www.rbc.com/investorrelations>

MRB: Qualitative disclosures for banks using the Internal Models Approach (IMA)
Internal models used for measuring Market Risk

Measure	Description	Percentage of market risk regulatory capital ¹
Regulatory Value at Risk (VaR)	VaR is a statistical measure of potential loss for a financial portfolio computed at a given level of confidence and over a defined holding period. We measure VaR at the 99 th percentile confidence level and for regulatory capital measurement we take the more conservative of the one-day holding period scaled up to a ten-day holding period or the direct ten-day holding period. The measure is computed daily, using a full-revaluation approach to generate potential profit or loss values arising from historically observed daily market movements. The historical period used to compute VaR is comprised of the recent two years of equally weighted market data, and is rolled forward on a weekly basis. A mix of absolute and relative returns are used in generating the historical market changes.	8%
Stressed VaR (SVaR)	SVaR is calculated daily in a similar manner as VaR, but based on a ten-day holding period directly and using a one year period of heightened volatility. We currently use the historical period between 2019 and 2020 covering the market volatility observed during Q2 2020. This historical period chosen reflects the one year period of greatest potential loss for our portfolio.	28%
Incremental Risk Charge (IRC)	IRC captures the risk of losses under default or rating changes for issuers of traded instruments. IRC is measured over a one-year horizon at a 99.9% confidence level, and captures different liquidity horizons for instruments and concentrations in issuers under a constant level of risk assumption.	13%

¹ As at July 31, 2022.

VaR and SVaR

The VaR and SVaR models are used for computing regulatory capital for trading book positions across the enterprise, where we have obtained approval from our regulator. We model a general market risk measure, a debt specific risk measure, and an equity total risk measure; along with a total correlated risk measure which combines the above distributions. For portions of our portfolio for which we do not have regulatory approval for models based capital, we use the Standardized Approach to compute regulatory capital.

For management purposes, VaR and SVaR are both computed with one-day holding periods and are applied to all positions that impact the bank's revenue across the trading book and non-trading book. A sensitivity-ladder interpolation approach is applied for some positions instead of full-revaluation, and inactive non-trading book positions are refreshed monthly.

MRB: Qualitative disclosures for banks using the Internal Models Approach (continued)

The table below presents an overview of Pillar 3 disclosure requirements that have been met within our 2021 Annual Report and incorporated by reference into this Pillar 3 report. Our 2021 Annual Report is available free of charge on our website at <http://www.rbc.com/investorrelations>

Pillar 3 disclosures requirement		RBC 2021 Annual Report section	Sub-Section
c)	General description of the models (VaR/stressed VaR)	Market Risk	Market Risk Controls – FVTPL positions
g)	Description of stress testing applied to the modelling parameters	Market Risk	Stress tests

The VaR and SVaR models are governed by our model risk governance framework, which requires that models are validated on a regular basis by a model validation group that is independent of the model developers. The VaR and SVaR models are also subject to ongoing model performance monitoring. The VaR model is back tested by comparing changes in the mark-to-market amounts to the computed VaR on a daily basis, in order to ensure that actual outcomes in trading revenue do not exceed the VaR projections beyond the expectations of the applied confidence interval. Backtesting is also performed using a hypothetical profit and loss calculation which allows for comparisons to the total correlated VaR, the general market risk VaR, and asset class VaR measures separately.

While the majority of market risks are reflected in our VaR models, there is the potential for certain risks to be inadequately captured. This can occur due to infrastructure limitations, lack of historical market data or missing risk factors within our VaR models. These Risks Not in VaR (RNIV) are identified through backtesting and other model monitoring processes, and are incorporated into the VaR models, where possible. An assessment of residual RNIV materiality is reviewed and monitored against thresholds at least quarterly.

Incremental Risk Charge

Our IRC model is applied to debt instruments, credit products, and credit derivatives within our trading portfolios. A probability modelling technique known as the Monte Carlo simulation process is used to generate a statistically relevant number of loss scenarios due to issuer ratings migration and default in order to establish the losses at that confidence level. These scenarios are determined using a transition probability matrix which is calibrated using recent 20 years of historical issuer ratings migration and default observations. Correlations between issuer regions and sectors are calibrated using eight years of historical equity time series data. For the Monte Carlo process, each position is assigned a liquidity horizon (the length of time to close out a position) of three months, six months, or one year, depending on its issuer type, credit rating, and maturity profile.

The IRC model is also subject to the same independent vetting, validation procedures and model risk governance framework as the VaR and SVaR models. Model performance monitoring includes reviews and stress testing of model assumptions, which includes stress testing the historical correlation and liquidity assumptions. Due to the long time horizon and high confidence level of the risk measure, we do not perform backtesting of the IRC model as we do for the VaR measure.

MR1: Market risk under standardized approach

The following table presents the components of the capital requirement under the standardized approach for market risk.

(Millions of Canadian dollars)		RWA	
		As at July 31, 2022	As at April 30, 2022
Outright products			
1	Interest rate risk (general and specific)	4,949	4,552
2	Equity risk (general and specific)	1,035	397
3	Foreign exchange risk	2,356	2,601
4	Commodity risk	2,500	1,656
Options			
5	Simplified approach	-	-
6	Delta-plus method	-	-
7	Scenario approach	5,671	6,347
8	Securitization	1,220	1,484
9	Total	17,731	17,037

The Commodity risk RWA growth is primarily driven by increased exposures in Natural Gas and Power products due to higher average energy prices through the quarter.

MR2: RWA flow statements of market risk exposures under the Internal Models Approach (IMA)

The following table presents variations in the Market RWA determined under the Internal Models Approach.

As at July 31, 2022

	(Millions of Canadian dollars)	a	b	c	d	e	f
		VaR	Stressed VaR	IRC	CRM	Other	Total RWA
1	RWA at previous quarter end	4,558	11,825	4,431	-	-	20,814
2	Movement in risk levels ¹	884	(2,069)	77	-	-	(1,108)
3	Model updates/changes ²	(2,728)	(142)	-	-	-	(2,870)
4	Methodology and policy ³	-	-	-	-	-	-
5	Acquisitions and disposals	-	-	-	-	-	-
6	Foreign exchange movements ⁴	-	-	(16)	-	-	(16)
7	Other	-	-	-	-	-	-
8	RWA at end of Reporting Period	2,714	9,614	4,492	-	-	16,820

¹ Change in risk due to position changes and averaging in of prior quarter model updates.

² Updates to the model to reflect recent market volatility, model implementation, change in model scope or any change to address model malfunctions including changes through model calibrations/realignments.

³ Methodology changes to the calculations driven by regulatory policy changes. Please note that these changes may be temporary.

⁴ Foreign exchange movements for VaR and Stressed VaR are embedded within movement in risk levels.

As at April 30, 2022

	(Millions of Canadian dollars)	a	b	c	d	e	f
		VaR	Stressed VaR	IRC	CRM	Other	Total RWA
1	RWA at previous quarter end	11,037	11,083	4,300	-	-	26,420
2	Movement in risk levels ¹	(460)	682	72	-	-	294
3	Model updates/changes ²	(6,019)	60	-	-	-	(5,959)
4	Methodology and policy ³	-	-	-	-	-	-
5	Acquisitions and disposals	-	-	-	-	-	-
6	Foreign exchange movements ⁴	-	-	59	-	-	59
7	Other	-	-	-	-	-	-
8	RWA at end of Reporting Period	4,558	11,825	4,431	-	-	20,814

¹ Change in risk due to position changes and averaging in of prior quarter model updates.

² Updates to the model to reflect recent market volatility, model implementation, change in model scope or any change to address model malfunctions including changes through model calibrations/realignments.

³ Methodology changes to the calculations driven by regulatory policy changes. Please note that these changes may be temporary.

⁴ Foreign exchange movements for VaR and Stressed VaR are embedded within movement in risk levels.

MR3: IMA values for trading portfolios

The following table presents minimum, maximum, average and period-end regulatory 10 day VaR, regulatory 10 day stressed VaR, incremental risk charge and comprehensive risk capital charge. These measures are based on the scope of the global trading book with internal models approach (IMA) approval from OSFI for calculating regulatory market risk capital.

(Millions of Canadian dollars)		Value	
VaR (10 day 99%)^{1,2}		As at July 31, 2022	As at April 30, 2022
1	Maximum value	110	372
2	Average value	73	138
3	Minimum value	52	61
4	Period end	62	76
Stressed VaR (10 day 99%)¹			
5	Maximum value	340	439
6	Average value	260	316
7	Minimum value	159	200
8	Period end	242	300
Incremental Risk Charge (99.9%)			
9	Maximum value	426	404
10	Average value	354	330
11	Minimum value	277	281
12	Period end	359	354
Comprehensive Risk capital charge (99.9%)			
13	Maximum value	-	-
14	Average value	-	-
15	Minimum value	-	-
16	Period end	-	-
17	Floor (standardized measurement method)	-	-

¹ The portfolio included in regulatory VaR and SVaR represents a subset of the portfolio captured in management VaR and SVaR reported in the Market Risk section of the 2021 Annual Report.

² VaR shown this quarter reflects the more conservative of either a one-day holding period scaled up to a ten-day holding period or the direct ten-day holding period.

Average VaR of \$138 million decreased by \$65 million primarily due to Q2 2020 period of significant market volatility no longer being reflected in our two-year historical VaR period.

LEVERAGE
LR1: Summary comparison of accounting assets vs leverage ratio exposure measure

The following table presents a reconciliation of our total assets per our published financial statements to our leverage ratio exposure measure.

LEVERAGE RATIO ¹		Q3/2022	Q2/2022	Q1/2022	Q4/2021	Q3/2021
Summary comparison of accounting assets vs. leverage ratio exposure measure (Millions of Canadian dollars)						
1	Total consolidated assets as per published financial statements	\$1,842,092	1,848,572	1,752,469	1,706,323	1,693,540
2	Adjustment for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	(16,940)	(16,400)	(17,701)	(17,206)	(16,852)
3	Adjustment for securitized exposures that meet the operational requirements for the recognition of risk transfer ²	-	-	-	-	-
4	Adjustment for fiduciary assets recognized on the balance sheet pursuant to the operative accounting framework but excluded from the leverage ratio exposure measure	-	-	-	-	-
5	Adjustments for derivative financial instruments	(23,150)	(51,622)	(246)	(4,765)	(15,322)
6	Adjustment for securities financing transactions (SFT) (i.e. repo assets and similar secured lending)	15,711	15,557	16,430	13,907	12,044
7	Adjustments for off-balance sheet items (i.e., credit equivalent amounts of off-balance sheet exposures)	239,621	235,629	228,707	222,658	218,889
8	Other adjustments ³	(217,489)	(219,307)	(219,030)	(258,873)	(259,066)
9	Leverage Ratio Exposure	\$1,839,845	1,812,429	1,760,629	1,662,044	1,633,233

¹ Based on OSFI's LR guideline issued in October 2018.

² OSFI's October 2018 LR guideline allows for the exclusion of securitized exposures that meet the operational requirements for risk transference. In Q1/2021 transitional methodology changes under the securitization framework did not allow us to recognize risk transference as further explained in SEC 1.

³ Includes OSFI permitted exclusion of central bank reserves and sovereign-issued securities that qualify as high quality liquid assets and exposures related to the US Government Payment Protection Program (PPP).

LR2: Leverage ratio common disclosure template

The following table presents a detailed breakdown of the components of our leverage ratio. Maintaining a prescribed minimum level of leverage helps neutralizes leverage risk in the event of unexpected economic crises. OSFI requires maintenance of a minimum leverage ratio of 3% at all times.

LEVERAGE RATIO COMMON DISCLOSURE TEMPLATE ¹		Q3/2022	Q2/2022	Q1/2022	Q4/2021	Q3/2021
(Millions of Canadian dollars, except percentages)						
On-balance sheet exposures						
1	On-balance sheet items (excluding derivatives, SFTs and grandfathered securitization exposures, but including collateral)	1,203,354	1,179,634	1,141,785	1,057,130	1,025,819
2	Gross-up for derivatives collateral provided where deducted from balance sheet assets pursuant to the operative accounting framework (IFRS)	-	-	-	-	-
3	(Deductions of receivables assets for cash variation margin provided in derivatives transactions)	(20,944)	(24,092)	(15,829)	(16,317)	(16,569)
4	(Asset amounts deducted in determining Basel III Tier 1 capital)	(18,434)	(19,042)	(17,627)	(17,088)	(15,890)
5	Total on-balance sheet exposure (excluding derivatives and SFTs) (sum of lines 1 and 4)	1,163,976	1,136,500	1,108,329	1,023,725	993,360
Derivatives exposures						
6	Replacement cost associated with all derivatives transactions (i.e., net of eligible cash variation margin)	35,086	43,576	27,241	29,322	28,820
7	Add-on amounts for potential future exposure (PFE) associated with all derivatives transactions	62,798	60,134	64,451	61,188	57,623
8	(Exempted central counterparty (CCP)-leg of client-cleared trade exposures)	-	-	-	-	-
9	Adjusted effective notional amount of written credit derivatives	1,023	872	381	266	268
10	(Adjusted effective notional offsets and add-on deductions for written credit derivatives)	-	-	-	-	-
11	Total derivative exposures (sum of lines 6 to 10)	98,907	104,582	92,073	90,776	86,711
Securities financing transaction exposures						
12	Gross SFT assets recognized for accounting purposes (with no recognition of netting), after adjusting for sale accounting transactions	416,893	401,372	399,556	388,006	388,202
13	(Netted amounts of cash payables and cash receivables of gross SFT assets)	(95,262)	(81,211)	(84,466)	(77,028)	(65,973)
14	Counterparty credit risk (CCR) exposure for SFTs	15,710	15,557	16,430	13,907	12,044
15	Agent transaction exposures	-	-	-	-	-
16	Total securities financing transaction exposures (sum of lines 12 to 15)	337,341	335,718	331,520	324,885	334,273
Other off-balance sheet exposures						
17	Off-balance sheet exposures at gross notional amount	706,583	694,093	676,761	660,224	656,218
18	(Adjustments for conversion to credit equivalent amounts)	(466,962)	(458,464)	(448,054)	(437,566)	(437,329)
19	Off-balance sheet items (sum of lines 17 and 18)	239,621	235,629	228,707	222,658	218,889
Capital and Total Exposures						
20	Tier 1 capital	84,207	84,345	84,493	82,246	81,218
20a	Tier 1 capital with transitional arrangements for ECL provisioning not applied	84,073	84,242	84,298	81,826	80,659
21	Total Exposures (sum of lines 3,11,16 and 19)	1,839,845	1,812,429	1,760,629	1,662,044	1,633,233
Leverage ratio						
22	Basel III leverage ratio	4.6%	4.7%	4.8%	4.9%	5.0%
22a	Basel III leverage ratio with transitional arrangements for ECL provisioning not applied	4.6%	4.6%	4.8%	4.9%	4.9%

¹ Based on OSFI's LR guideline issued October 2018.

Our Leverage ratio of 4.6% was down 10 bps, mainly due to business-driven growth in leverage exposures and share repurchases, partially offset by net internal capital generation. Leverage exposures increased by \$27.4 billion, mainly driven by business growth in

residential mortgages, wholesale loans, undrawn commitments and repo-style transactions, partially offset by the impact of foreign exchange translation.

TOTAL LOSS ABSORBING CAPACITY (TLAC) DISCLOSURE REQUIREMENTS
KM2: Key metrics – TLAC requirements (at resolution group level)

The following summary table provides information about our TLAC available, and TLAC requirements applied, at the resolution group level under a Single Point of Entry. TLAC requirements establish two minimum standards, which are required to be met effective November 1, 2021: the risk-based TLAC ratio, which builds on the risk-based capital ratios described in the CAR guideline, and the TLAC leverage ratio, which builds on the leverage ratio described in OSFI's LR guideline. The risk-based TLAC ratio is defined as TLAC divided by Total risk-weighted assets (RWA) while the TLAC leverage ratio is defined as TLAC divided by the Leverage ratio exposure. OSFI has provided notification requiring systemically important banks to maintain a minimum TLAC ratio of 22.5% (inclusive of the revised domestic stability buffer of 1% in Q2 2020) and a TLAC leverage ratio of 6.75%. The TLAC ratio requirements increased to 24% in Q4 2021 reflecting the 1.5% increase of the DSB effective October 31, 2021. We began issuing TLAC eligible debt in Q4 2018 and our TLAC ratio is expected to increase through normal course refinancing of maturing debt.

6b	Does the subordination exemption in the penultimate paragraph of Section 11 of the FSB TLAC Term Sheet apply?	No	No	No	No	No	-
6c	If the capped subordination exemption applies, the amount of funding issued that ranks pari passu with Excluded Liabilities and that is recognized as external TLAC, divided by funding issued that ranks pari passu with Excluded Liabilities and that would be recognized as external TLAC if no cap was applied (%)	N/A	N/A	N/A	N/A	N/A	-

¹ Lines 1, 3 and 5 incorporate expected credit loss (ECL) transitional modification provided by OSFI as announced on March 27, 2020. Lines 1a, 3a and 5a represent TLAC available with transitional arrangements for ECL provisioning not applied.

Our TLAC ratio of 27.6% was up 60 bps, reflecting a favourable impact from the net issuance of other TLAC instruments, partially offset by the factors noted above in KM1.

Our TLAC leverage ratio of 8.8% was up 10bps, reflecting a favourable impact from the net issuance of other TLAC instruments, partially offset by the factors noted in LR1.

TLAC1: TLAC composition (at resolution group level)

The following table presents details of the composition of our TLAC.

As at July 31, 2022

(Millions of Canadian dollars, except as otherwise noted)		Amount
	Regulatory capital elements of TLAC and adjustments	
1	Common Equity Tier 1 capital (CET1)	76,907
2	Additional Tier 1 capital (AT1) before TLAC adjustments	7,300
3	AT1 ineligible as TLAC as issued out of subsidiaries to third parties	-
4	Other adjustments	-
5	AT1 instruments eligible under the TLAC framework	7,300
6	Tier 2 capital (T2) before TLAC adjustments	9,650
7	Amortised portion of T2 instruments where remaining maturity > 1 year	768
8	T2 capital ineligible as TLAC as issued out of subsidiaries to third parties	-
9	Other adjustments	-
10	T2 instruments eligible under the TLAC framework	10,418
11	TLAC arising from regulatory capital	94,625
	Non-regulatory capital elements of TLAC	
12	External TLAC instruments issued directly by the bank and subordinated to excluded liabilities	-
13	External TLAC instruments issued directly by the bank which are not subordinated to excluded liabilities but meet all other TLAC term sheet requirements	67,857
14	Of which: amount eligible as TLAC after application of the caps	67,857
15	External TLAC instruments issued by funding vehicles prior to January 1, 2022	-
16	Eligible ex ante commitments to recapitalise a G-SIB in resolution	-
17	TLAC arising from non-regulatory capital instruments before adjustments	67,857
	Non-regulatory capital elements of TLAC: adjustments	
18	TLAC before deductions	162,482
19	Deductions of exposures between MPE resolution groups that correspond to items eligible for TLAC (not applicable to SPE G-SIBs and D-SIBs)	-
20	Deduction of investments in own other TLAC liabilities	(198)
21	Other adjustments to TLAC	-
22	TLAC available after deductions	162,284
	Risk-weighted assets and leverage exposure measure for TLAC purposes	
23	Total risk-weighted assets adjusted as permitted under the TLAC regime	589,050
24	Leverage exposure measure	1,839,845
	TLAC ratios and buffers	
25	TLAC Ratio (as a percentage of risk-weighted assets adjusted as permitted under the TLAC regime, row 22 / row 23)	27.6%
26	TLAC Leverage Ratio (as a percentage of leverage exposure)	8.8%
27	CET1 (as a percentage of risk-weighted assets) available after meeting the resolution group's minimum capital and TLAC requirements	7.9%
28	Institution-specific buffer (capital conservation buffer plus countercyclical buffer plus higher loss absorbency, expressed as a percentage of risk-weighted assets)	3.5%
29	Of which: capital conservation buffer	2.5%
30	Of which: bank specific countercyclical buffer	0.0%
31	Of which: higher loss absorbency	1.0%

TLAC1: TLAC composition (at resolution group level) (continued)

As at April 30, 2022

(Millions of Canadian dollars, except as otherwise noted)		Amount
Regulatory capital elements of TLAC and adjustments		
1	Common Equity Tier 1 capital (CET1)	77,069
2	Additional Tier 1 capital (AT1) before TLAC adjustments	7,276
3	AT1 ineligible as TLAC as issued out of subsidiaries to third parties	-
4	Other adjustments	-
5	AT1 instruments eligible under the TLAC framework	7,276
6	Tier 2 capital (T2) before TLAC adjustments	9,526
7	Amortised portion of T2 instruments where remaining maturity > 1 year	771
8	T2 capital ineligible as TLAC as issued out of subsidiaries to third parties	-
9	Other adjustments	-
10	T2 instruments eligible under the TLAC framework	10,297
11	TLAC arising from regulatory capital	94,642
Non-regulatory capital elements of TLAC		
12	External TLAC instruments issued directly by the bank and subordinated to excluded liabilities	-
13	External TLAC instruments issued directly by the bank which are not subordinated to excluded liabilities but meet all other TLAC term sheet requirements	63,853
14	Of which: amount eligible as TLAC after application of the caps	63,853
15	External TLAC instruments issued by funding vehicles prior to January 1, 2022	-
16	Eligible ex ante commitments to recapitalise a G-SIB in resolution	-
17	TLAC arising from non-regulatory capital instruments before adjustments	63,853
Non-regulatory capital elements of TLAC: adjustments		
18	TLAC before deductions	158,495
19	Deductions of exposures between MPE resolution groups that correspond to items eligible for TLAC (not applicable to SPE G-SIBs and D-SIBs)	-
20	Deduction of investments in own other TLAC liabilities	(355)
21	Other adjustments to TLAC	-
22	TLAC available after deductions	158,140
Risk-weighted assets and leverage exposure measure for TLAC purposes		
23	Total risk-weighted assets adjusted as permitted under the TLAC regime	585,839
24	Leverage exposure measure	1,812,429
TLAC ratios and buffers		
25	TLAC Ratio (as a percentage of risk-weighted assets adjusted as permitted under the TLAC regime, row 22 / row 23)	27.0%
26	TLAC Leverage Ratio (as a percentage of leverage exposure)	8.7%
27	CET1 (as a percentage of risk-weighted assets) available after meeting the resolution group's minimum capital and TLAC requirements	8.0%
28	Institution-specific buffer (capital conservation buffer plus countercyclical buffer plus higher loss absorbency, expressed as a percentage of risk-weighted assets)	3.5%
29	Of which: capital conservation buffer	2.5%
30	Of which: bank specific countercyclical buffer	0.0%
31	Of which: higher loss absorbency	1.0%

TLAC2: Material subgroup entity – creditor ranking at legal entity level (G-SIBs only)

TLAC 2 is a G-SIB disclosure requirement to provide the ranking of the liability structure of all our material subsidiaries in foreign jurisdictions as defined by the FSB TLAC term sheet. RBC US Group Holdings LLC (“RBC IHC”) is a material subsidiary entity for which TLAC 2 disclosure would be required. Effective January 1, 2021, RBC IHC must comply with the Federal Reserve TLAC rules which require reporting of TLAC ratios for calendar quarters on or after June 2021. OSFI has advised RBC it can align its IHC TLAC 2 disclosure requirements to similarly commence in Q3 2021 and will require only disclosure of IHC calendar quarter TLAC ratios. OSFI does require us to disclose TLAC 2 for any other material subsidiary identified, however, at this time RBC IHC is our only material subsidiary.

As at July 31, 2022

(Millions of Canadian dollars, except as otherwise noted) Based on US GAAP		Creditor ranking					Sum
		1 (most junior)	2	3	4	5	
1	Is the resolution entity the creditor/investor? (yes or no)	yes	-	no	yes	-	-
2	Description of creditor ranking	Common shares	Preferred shares and Limited Recourse Capital Notes	Subordinated Debt	Bail-in Debt ¹	Other Liabilities excluding Bail-in Debt and Subordinated Debt ²	
3	Total capital and liabilities net of credit risk mitigation	22,219	-	193	14,283	-	36,695
4	Subset of row 3 that are excluded liabilities	-	-	193	-	-	193
5	Total capital and liabilities less excluded liabilities (row 3 minus row 4)	22,219	-	-	14,283	-	36,502
6	Subset of row 5 that are eligible as TLAC	22,219	-	-	14,283	-	36,502
7	Subset of row 6 with 1 year ≤ residual maturity < 2 years			-	-	-	-
8	Subset of row 6 with 2 years ≤ residual maturity < 5 years			-	8,035	-	8,035
9	Subset of row 6 with 5 years ≤ residual maturity < 10 years			-	6,248	-	6,248
10	Subset of row 6 with residual maturity ≥ 10 years, but excluded perpetual securities			-	-	-	-
11	Subset of row 6 that is perpetual securities	22,219	-	-	-	-	22,219

¹ Under the Bail-in regime, claims of some creditors whose claims otherwise rank equally with those of the holders holding bail-inable notes would be excluded from a bail-in conversion and thus the holders and beneficial owners of bail-inable notes will have to absorb losses ahead of these other creditors as a result of the bail-in conversion. Bail-in-Debt represents TLAC Eligible Long-Term Debt based on U.S. TLAC rules.

² Completion of this column is not required by OSFI at this time.
